

Digital Health Panel: The Future of eHealth

Panel Co-chairs

Luuk Simons, Delft University, The Netherlands

Juergen Seitz, Baden-Wuerttemberg Cooperative State University, Germany

Panel outline

What are some of the main challenges or opportunities for the future of eHealth? For example: what impact can be expected from generative AIs like chatGTP? Is a reliable physician AI in the making? Or: how will telemedicine evolve, following the jump it made during Covid-19? Will wearables or home health sensors finally make a big dent (prevention, empowerment, cure)? Which science & technology innovations may become game changers? Or: what are opportunities for more sustainable and effective health care in 2050?

Panellists

Nilmini Wickramasinghe, Swinburne University of Technology and Epworth HealthCare, Australia

*Presentation title: **Intelligent Analytics: a brave new world for Healthcare Delivery***

Juergen Seitz, Baden-Wuerttemberg Cooperative State University, Germany

*Presentation title: **Data Analytics in Healthcare: a competition between the Western World and China?***

Doug Vogel, Harbin Institute of Technology, China

*Presentation title: **Healthcare Transformation***

Luuk Simons, Delft University, The Netherlands

*Presentation title: **The 2050 Self-Health Promise: Could Bioinformatics Quantified Self-Help Avoid 80% of Diseases?***
